

# Join our team as a **Junior PHP Dev.**

Salary: £25,000 - £32,500 DOE

Location: Tarporley, Cheshire

We're looking to bring on board a Junior PHP Developer to work within our Digital Product team - a group of passionate, driven experts. We're a great bunch, and we've created something very special. The team is built up of strategists, creative designers, front-end and back-end developers, and account managers. Josh and Martin lead the business. Martin heads up client relationships and acquisition, and Josh takes the lead on the day-to-day operation and delivery.

Our office is in Cheshire - a purpose-built barn conversion out in the countryside, near the village of Tarporley just a ten-minute drive from Chester. We picked our location for a few reasons: we're 40 minutes from Manchester and Liverpool and easily commutable from North Wales and the rest of Cheshire; we've got a faster internet connection than most city offices; and it's unlimited, free parking.

To apply for this role, you'll need to either be self-taught and ready for your first role, or have at least a year of development experience working either in-house or within an agency. It is key that you have a good grasp of the basics of PHP development, along with the enthusiasm and drive to reach the next level.

You'll be working with several clients across a wide range of sectors including start-ups, national and international brands. Your schedule and client communications will be managed by our account managers, however we will expect you to manage your time and the deliverables yourself.

## **You will need:**

- Good knowledge within all front-end languages including HTML, CSS and jQuery
- A detailed knowledge within PHP, ideally with knowledge around security and vulnerabilities
- Experience in working with WordPress, Laravel and their databases
- A keen eye for design to ensure all development is pixel-perfect and thoroughly tested
- Enthusiasm to seek out the latest technologies within the industry
- To be comfortable working across web, web app and app projects
- To thrive in a fast-paced environment with unmissable deadlines
- To ensure all outputs are on-brief for our clients
- A flexible and adaptable working approach to meet needs of our dynamic business
